# C-ATS COMPLETE

## BESPOKE ACOUSTIC TREATMENT SYSTEM

Cinema-ATS Complete Standard is a bespoke acoustic treatment system using C-ATS proprietary Multipanels and Scattering panels. The partner design service creates an optimised acoustic treatment layout that fully addresses the 3Rs of Acoustics whilst using the minimum possible install depth.

### Cinema-ATS Multipanels

are dual sided panels that are used to control either Resonance or Reverberation within the C-ATS Complete system and operate above 40Hz. Each Multipanel is 1200 x 600 x 50mm in size.

### Cinema-ATS Scattering Panels

operate at frequencies above 350Hz and used to control Reflection within the C-ATS Packs System. Each Scattering Panel is 300 x 300 x 50mm in size.

C-ATS Complete Multipanels enable true Resonance optimisation in a shallow depth but require a large surface area to provide maximum performance. C-ATS Complete requires coverage of the 4 walls with the ceiling a recommended install option. When combined with C-ATS subwoofer location guide it is possible to fully address each of the 3Rs of Acoustics, Resonance, Reverberation and Reflection is just 50mm of depth.

**Cinema Acoustic Treatment Systems**  
is a British brand specialising in high performance  
acoustic treatment for residential cinemas.
